# Meridian Technologies

## Business Continuity Management Plan

**Document ID:** OPS-001

**Department:** Operations

**Team:** Business Continuity

**Version:** 1.0

**Status:** Active

**Document Owner:** Neha Menon, Operations

### 1. Purpose

This document defines how Meridian Technologies will maintain essential business operations during unexpected disruptions. It establishes responsibilities, recovery priorities, communication procedures, and minimum continuity requirements.

### 2. Scope

This plan applies to all Operations teams and business functions that support essential company services. It covers disruptions caused by infrastructure failures, service outages, vendor failures, workplace unavailability, and other operational emergencies.

### 3. Critical Business Functions

The following functions are considered critical:

- Customer and internal service operations.
- Vendor coordination and essential supplier management.
- Access to operational records and business systems.
- Internal incident communication and escalation.
- Coordination with IT and Security during technology-related disruptions.

### 4. Recovery Objectives

| Service or Function | Recovery Time Objective |
| --- | --- |

| | |
|---|---|
| Critical internal services | 4 hours |
| Vendor coordination | 8 hours |
| Operational reporting | 12 hours |
| Non-critical administrative activities | 24 hours |

The recovery time objective (RTO) represents the maximum targeted time for restoring a function after disruption.

## 5. Roles and Responsibilities

**Operations Department:** Coordinates business continuity activities and ensures critical operational functions are prioritized.

**Business Continuity Team:** Maintains continuity documentation, identifies operational dependencies, and coordinates recovery exercises.

**IT and Security:** Supports restoration of affected infrastructure, systems, and access services.

**Department Leads:** Identify essential personnel and communicate operational requirements during disruptions.

## 6. Continuity Procedures

When a major disruption occurs:

1. The affected team reports the disruption to the Operations lead.
2. The Operations lead assesses the impact on critical business functions.

3. Relevant department leads and IT and Security are notified.
4. Critical services are prioritized according to recovery objectives.
5. Teams use approved alternative workflows where normal operations are unavailable.
6. Recovery progress is recorded until normal operations resume.

## 7. Communication

During a continuity event, updates must include the affected service, business impact, current recovery status, responsible team, and estimated next update.

Internal communication should use approved company communication channels. Sensitive operational information must not be shared through unauthorized external channels.

## 8. Testing and Review

The Business Continuity Team must conduct a continuity review at least once every quarter. A simulation exercise should be conducted twice per year.

Identified gaps must be documented with an assigned owner and target resolution date.

## 9. Document Review

This document must be reviewed annually or after a major operational disruption, organizational change, or significant change in critical business dependencies.
